

Holiday Homes Management System

Problem Definition

The system provides a platform to manage holiday home bookings, including search, availability, and customer handling features in one place.

Features Covered

- User login & registration
- View and filter holiday homes
- Booking system
- Owner login to manage homes
- Admin panel for approval and management
- Review and rating system

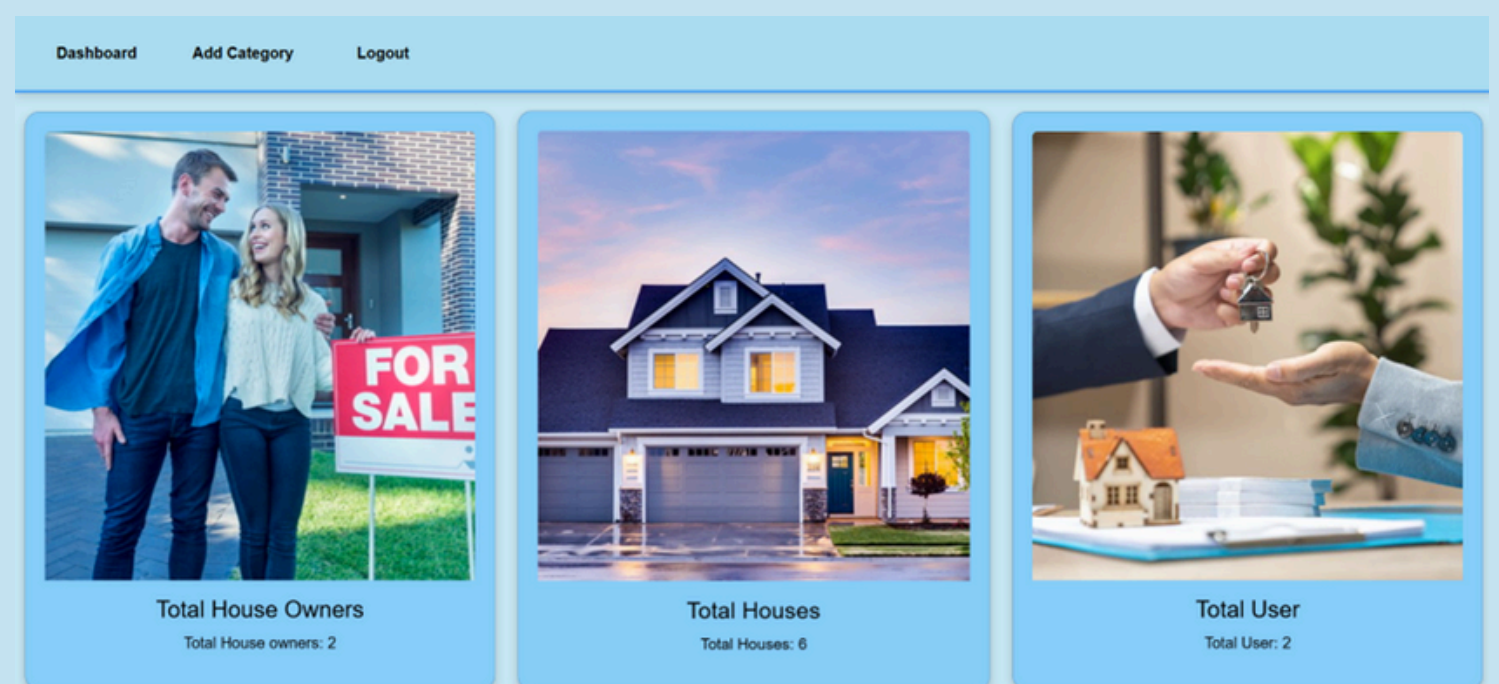

Assumptions

- Sellers provide honest property details
- Users must log in to book a home
- Admin keeps system data updated
- Users will give genuine reviews and ratings after using a service

Comparison with Existing System

Traditional methods like phone bookings or agent-based searches are time-consuming. Our system is faster, available 24/7, and gives full control to users and owners.

Results – Graphical

Flow -Block Diagram

- User → Browse homes → Select home → Book → Give review
- Owner → Register → Add property → View bookings
- Admin → Approve listings → Manage users and homes

Future Scope

- Add payment gateway for online booking
- Show nearby tourist attractions
- Multi-language support
- Add chatbot for help
- Push notifications for offers and updates
